About me

I'm a Data Analyst with hands-on experience in SQL, Excel, Power BI, and Python, focused on turning raw data into clear insights that support better business decisions.

Through personal and practical projects, I've worked on data cleaning, exploratory analysis, KPI tracking, and interactive dashboard development. I enjoy digging into data, identifying meaningful trends, and presenting findings in a simple and understandable way.

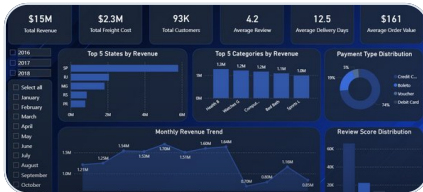

I'm looking to join a team where I can apply my analytical skills to real-world business problems, continue developing professionally, and contribute to data-driven decision-making.
